

A Forest Inside a Tree!

The California Redwoods are so big and tall that they support an entire ecosystem within their branches, hundreds of feet off the ground. Color the picture and then talk about the different things you see.

Redwood trunk growing off of the limb

Yellow-Cheeked Chipmunk

Red Huckleberry

Western Hemlock

Soil (As thick as 3 feet)

Tree roots

Tree branch

Dead leaves and other debris form soil, which can store enough water to sustain plants throughout a dry summer.

Birds Such as The Stellers Jay Or Marbled Murrelet

Evergreen Huckleberry

Leatherleaf Fern

Salamander

Tree trunk
